PROFESSIONAL SUMMARY

MCA Graduate and Google Cybersecurity Certified SOC Analyst with hands-on experience in alert monitoring, triage, and incident documentation across Suricata IDS/IPS and Splunk/Wazuh SIEM home labs (200+ simulated alerts triaged, 15+ custom detection rules tuned, MITRE ATT&CK-based classification). 11 months of 24×7 shift-based, SLA-driven ticket triage and Tier 1→Tier 2 escalation experience from a prior BPO SME role; open to 24×7 rotational shifts.

TECHNICAL SKILLS

SIEM & Threat Detection: Splunk (SPL, dashboards, correlation rules), Wazuh SIEM (agent deployment, rule tuning), Suricata IDS/IPS, log analysis & normalization

Threat Management & Incident Response: Alert triage & escalation, Incident Response Lifecycle, MITRE ATT&CK, Cyber Kill Chain, malware triage, phishing analysis, IOC extraction, OSINT, SOAR fundamentals

Networks & Multi-Protocol Environments: TCP/IP, DNS, HTTP/S, OSI Model, Wireshark, TCPdump, Nmap, firewall rules, Linux (Kali/Ubuntu), Windows Event Logs, Sysmon, endpoint security

Security Frameworks & Tools: NIST CSF, ISO 27001, IAM/RBAC, least privilege, DVWA, VirtualBox/VMware, Python, Bash, SQL, Jira, ServiceNow (basic familiarity)

EXPERIENCE

Customer Support Executive & SME **Mar 2023 - Jan 2024**

Niftel Communications - Blinkit Process

- Triaged and prioritized 50-80+ support tickets daily in a 24×7 rotational shift environment, maintaining 100% SLA adherence through priority-based routing and structured escalation - the same triage discipline required for SOC Tier 1 alert queue management.
- Promoted to SME within 6 months; performed root-cause analysis on escalated cases and documented findings in runbooks per defined escalation trees, earning Top Performer (×2) for zero-miss critical escalations - building the Tier 1-Tier 2 handoff discipline relevant to SOC L1 monitoring.

SECURITY PROJECTS

Network Threat Detection Lab - Suricata IDS/IPS + Splunk | Suricata · Splunk · Wireshark · Nmap · Bash · MITRE ATT&CK | 2026

- Performed network reconnaissance from Kali Linux using Nmap; analyzed traffic in Wireshark to identify scan signatures and SYN flood patterns.
- Authored 15+ custom Suricata IDS/IPS rules for port scans and abnormal packet rates; built Splunk SPL dashboards from eve.json logs, reducing false positives.
- Automated log monitoring with Bash; mapped detections to MITRE ATT&CK (T1595, T1046). Repository: GitHub

Web Attack Detection Lab - Wazuh SIEM + DVWA | Wazuh · DVWA · SQLMap · Apache2 · MITRE ATT&CK | 2026

- Executed SQL injection attacks on DVWA using SQLMap; identified injection patterns via real-time Apache2 log analysis.
- Ingested Apache2 logs into Wazuh SIEM for alerting and dashboards; mapped attacks to MITRE ATT&CK T1190. Repository: GitHub

Incident Response RAG Copilot | FastAPI · Streamlit · Ollama LLMs · ChromaDB · RAG | 2026

- Built an AI incident response assistant using MITRE ATT&CK, Sigma Rules, and NIST playbooks as a knowledge base with semantic search via vector embeddings.
- Delivers MITRE-mapped incident analysis and remediation guidance to speed up SOC workflows. Repository: GitHub

Qrypta - Enterprise IAM Password Manager | Python · Flask · AES-256 · bcrypt · RBAC · 2FA | 2025

- Built a full-stack password manager with RBAC, 2FA, and AES-256 encryption for passwords/OTPs/PII.
- Added audit trails and session token-expiry to simulate enterprise IAM risk monitoring. Repository: GitHub

CERTIFICATIONS & EDUCATION

- Google Cybersecurity Professional Certificate - Feb 2026
- CompTIA Security+ (SY0-701) - Exam Scheduled: July 2026
- Master of Computer Applications (MCA) - CSVTU, Durg - June 2026
- B.Sc. in Computer Science - Hemchand Yadav University, Durg - May 2024
