PROFESSIONAL SUMMARY

Google Cybersecurity Certified aspiring SOC Analyst with hands-on experience in Splunk, Wazuh, and Suricata, including investigation of 200+ simulated security events and development of 15+ custom detection rules. Skilled in alert triage, log analysis, incident documentation, vulnerability management fundamentals, and Tier 1 to Tier 2 escalation within 24×7 environments. Leveraging proven SLA adherence and operational discipline to support enterprise security monitoring, incident response, vulnerability remediation, and post-incident investigations.

KEY HIGHLIGHTS

- Investigated and triaged 200+ simulated security events using SIEM tools.
- Authored 15+ custom Suricata detection rules and built Splunk correlation alerts.
- Maintained 100% SLA adherence while managing 50–80+ tickets daily in a 24×7 environment.
- Promoted to Subject Matter Expert within six months.
- Experienced in incident documentation, escalation workflows, and forensic log analysis.

TECHNICAL SKILLS

SIEM & Detection

- Splunk Enterprise (SPL, dashboards, correlation searches, alerting)
- Wazuh SIEM (agent deployment, rule tuning, dashboard analysis)
- Suricata IDS/IPS
- Security alert monitoring
- Event correlation
- Log analysis and normalization
- Firewall log analysis

Incident Response & Investigation

- Alert triage and validation
- Incident queue management
- Incident Response Lifecycle
- Host and network forensics
- Windows Event Logs and Sysmon analysis
- IOC extraction and investigation
- Malware triage
- Phishing analysis concepts
- Runbooks and playbooks
- Incident documentation and escalation
- Post-incident review support

Vulnerability Management

- Vulnerability management fundamentals
- Vulnerability assessment concepts
- CVE identification and mapping
- Remediation tracking and status reporting
- Qualys familiarity

- Microsoft Defender familiarity

Networking & Operating Systems

- Wireshark
- TCPdump
- Nmap
- TCP/IP
- DNS
- HTTP/HTTPS
- OSI Model
- Firewall rules
- Linux (Kali, Ubuntu)
- Windows administration basics
- Endpoint security concepts

Frameworks & Tools

- MITRE ATT&CK
- Cyber Kill Chain
- NIST CSF
- ISO 27001
- IAM/RBAC
- Least Privilege
- SOAR fundamentals
- ServiceNow (basic)
- Jira
- DVWA
- VirtualBox
- VMware
- Python
- Bash
- SQL

PROFESSIONAL EXPERIENCE

Customer Support Executive & Subject Matter Expert
Niftel Communications – Blinkit Process
Mar 2023 – Jan 2024

- Monitored and managed high-volume operational queues containing 50–80+ tickets daily, maintaining 100% SLA adherence through prioritization, timely resolution, and structured Tier 1 to Tier 2 escalations.
- Investigated escalated incidents, performed root-cause analysis, documented findings, and coordinated with cross-functional teams to ensure issue resolution and accurate status reporting.
- Maintained detailed incident records and knowledge-base documentation to support standardized workflows, operational consistency, and eAicient handoAs across shifts.
- Promoted to Subject Matter Expert within six months and recognized twice as a Top Performer for zero-miss critical escalations, accurate ticket categorization, and consistent performance in a 24×7 environment.

PROJECTS

SOC Detection Engineering Lab – Suricata IDS/IPS + Splunk 2026

Technologies: Suricata, Splunk, Wireshark, Nmap, Bash, MITRE ATT&CK

- Simulated network reconnaissance from Kali Linux using Nmap and captured traAic using Wireshark for forensic analysis.

- Authored 15+ custom Suricata detection rules and ingested eve.json logs into Splunk to generate actionable alerts.
- Built SPL correlation searches, dashboards, and visualizations to investigate more than 200 simulated security events.
- Triaged alerts, validated findings through packet and log analysis, documented investigative outcomes, and escalated simulated incidents using defined response procedures.
- Mapped observed techniques to MITRE ATT&CK, including T1595 (Active Scanning) and T1046 (Network Service Discovery), and published full incident documentation with screenshots on GitHub.

SOC Web Attack Investigation Lab – Wazuh SIEM + DVWA 2026

Technologies: Wazuh, DVWA, SQLMap, Apache2, MITRE ATT&CK

- Executed SQL injection attacks against DVWA using SQLMap and monitored Apache access and error logs to identify malicious activity.
- Ingested Apache logs into Wazuh SIEM for real-time alert generation, dashboard analysis, and rule validation.
- Conducted forensic log reviews to reconstruct attack timelines, validate findings, document evidence, and support remediation recommendations.
- Mapped findings to MITRE ATT&CK T1190 (Exploit Public-Facing Application) and published complete investigation documentation on GitHub.

Qrypta – Enterprise IAM Password Manager 2025 – Ongoing

Technologies: Python, Flask, AES-256, bcrypt, RBAC, 2FA, Audit Logging

- Built a full-stack password manager implementing RBAC, least-privilege principles, AES-256 encryption, bcrypt hashing, and multi-factor authentication.
- Implemented audit trails, session expiration, and user activity logging to support anomaly detection and forensic investigations.
- Applied vulnerability management concepts by reviewing findings, correlating vulnerabilities with publicly disclosed CVEs, prioritizing remediation activities, and documenting resolution status using structured workflows.

CERTIFICATIONS

- Google Cybersecurity Professional Certificate – 2026
- CompTIA Security+ – Expected 2026
- IT Help Desk Practical Certificate – 2025

EDUCATION

Master of Computer Applications (MCA)
CSVТУ, Durg | 2026

Bachelor of Science in Computer Science
Hemchand Yadav University, Durg
